Creation of Graduated Colors is a noteworthy one. It is one of those handy features to have. The basic idea is to create colors based on a base color and gradient. It is particularly effective at creating soft light colors as you can specify the spot to be placed of the light source that you can specify whether it be toward the light or away from it. It's also indicative of the kind of approach Adobe has taken with this product. However, Photoshop Elements uses multi-step gradients well below what Photoshop does. Only basic, one-directional gradients are available on Elements. You'd think a 16-year old product is ready for something more advanced. There are more increases in support with print-specific color management options and in the Preferences and other menu's as well. There's the addition more icon customization (I am using the "Edit" icon to create this list. A few of the smaller icons have been changed as well). Elements 2021 allows you to use the Wacom Wacom-branded devices in its pen-friendly drawing mode. **(If you have a Krita brush, you can use this feature. In fact, there is a great tutorial for it on the Krita website here.)** Adobe has also given Elements a way to work with the Cloud, though it's limited at this time. You can have it upload your images to the cloud, then open them within Elements. Unfortunately, adding comments, keywords, geotagging, and so on is at this time unavailable for situations when you aren't connected to the Internet. Another option is to import images from the cloud into Elements. This limited version of this tool is better than nothing, but one should not rely upon it.
