The text tool area does retain its old functionality. Besides being more colorful, the new Photoshop Elements 16 is a lot more efficient with large images. Only when saving large images to the OS does it ever get unusually sluggish. If you use the menu bar at the bottom of the screen, everything works briskly. With the toolbar at the top, however, Adobe Photoshop Elements 16 is a real hog. After all, the OS still keeps the memory allocation from the previous release, instead of thinking about better ways to utilize that available memory. As with the Lightroom and Photoshop Elements, there is no way to delete individual photos with Adobe Photoshop. You can, however, choose to work with or not with a specific image in a given folder. This is a bit different from Lightroom, where you can easily change the image size in Lightroom to 1/4, 1/2, or 3/4. You can, however, choose to work with a specific image in a given gallery with Photoshop. Configuration and preferences are now managed from the top left corner of the image canvas, saving valuable screen estate. As with all of the Adobe apps for iPad, there are no options for universal apps on the iPad Pro. However, one can assume that these options are listed in the Mac version. It's easier than ever to learn how to use Photoshop. There's a new Help feature that pops up whenever you click on a command button. It's similar to how Apple removed help menu and button labels for OS X. The very helpful spot-on tutorials are presented one at a time as you need them and disappear when you don't need them.
