Photoshop has one of the longest product roadmaps, plus, it has a large number of features. Many of these features are aimed to synchronize your file across Mac and Windows, or to help you create and edit complex images on mobile devices. With the launch of Photoshop on the web, many helpful features that are keyed to industry-leading Fundamentals of Creative Skills and Technology (FACS&T) are now available to Adobe customers. For example, Camera Raw Enhancements apply similar adjustment techniques to photos captured on mobile devices such as the new iPhone 7, while you work in the browser. Photoshop on the web is the latest example of Adobe's vision to expand innovation opportunities to users around the world. This new service will be broadly available in the months ahead. In the meantime, the website is powered by the internet-based experiences that are part of Adobe Muse, which was recently enhanced by a facelift designed to coincide with the web release. "We're thrilled to be releasing Photoshop on the web," said Brandon Lorence, senior vice president of Photoshop, Creative Cloud. "From launching a browser app to encouraging new ways to sharpen your processes, this is a major milestone for Photoshop and marks another step forward as part of our commitment to innovate across our products and platforms." Each box below includes details for updating to Adobe Photoshop on mobile devices. The update is available starting today from the Mac App Store, the Google Play store, the Apple App Store, Adobe.com, Adobe mobile apps for Android and Apple iOS devices, and the Developer Web site.

Wondering how to get your camera back from Photoshop Elements? A new new feature called 'Save your Camera Raw edits as a preset', allows you to take images with Elements, and apply editing effects to them, before converting them to Adobe Camera Raw (and save them as camera-ready images). Once you have converted the images to Adobe Camera Raw (with the new 'convert to Adobe Camera Raw' feature), head to Filters > Presets > Trusty Old Camera > Save to save the merged preset for later editing. You can instantly realize the power of the new Delete and Fill tool - Adobe says that some users can save 51 per cent of the time by emptying out a complicated composition with a single action, without having to hold down SHIFT and do it manually. To celebrate this change, Adobe has now added a new delete and fill mode that can eliminate thousands of objects in a single step. With this feature, the Delete command lets you select a group of cropped (selected) layers, then delete those layers together (like in the old version). You can also fully customize the fill-in command. You can now fill only a part of an object or use auto-fill, or even see how the

filler will be applied, before you click OK - you can also select a specific foreground color or a gradient to apply, or choose a stroke from a previously saved gradient if you prefer. Finally, you can change the height, scaling, and transparency of the filler before applying it. What if you can't get rid of that unwanted photo in your background? Adobe Pham tries to turn that into an opportunity to highlight your best shot. With forward-facing facial recognition, Adobe Pham can automatically determine the face within an image, and then the subject and viewer will be cropped out for you.
